

Discussion on Factors Affecting the Development of China's Fisheries and Countermeasures

Haitao Wang

Singapore Asia-Pacific Scientific Research Center

Abstract: In recent years, with the improvement and optimization of economic development, the public's attention to fisheries has been improved. Some studies have pointed out that by doing a good job in the development of fisheries, it is conducive to promoting the further construction of the chain system of aquatic products supply in China, and has a good promotion significance for the rational satisfaction of the people's dietary needs in China's economic development. Through the analysis of a large number of fishery research data, at this stage, there are some deficiencies in the development of fishery in China. Based on this, Relevant departments should combine the current development of agricultural work in China to summarize and analyze the factors affecting fishery development level, so as to formulate corresponding countermeasures. This paper makes a reasonable exploration of the current fishery situation in China, and gives corresponding optimization suggestions in order to promote the overall development of fishery in China.

Keywords : Fishery Industry; Influencing Factor; Elements of Work; Optimizing Strategy

As one of the important basic industries in China, the development of fishery is of great value to the people's dietary needs. At the same time, fishery is also an important source of development of aquatic products industry in China. Based on this, in order to promote the rational development of aquatic products in China, the relevant departments should pay attention to the corresponding fisheries. In order to promote the overall development of China's fishery market. In view of this problem, in recent years, researchers have analyzed the development of fishery in China, and given the corresponding optimization suggestions in order to help the development and prosperity of fishery in China. In order to provide help for the overall implementation of China's economic development.

1. Related factors affecting the development of fisheries in China

1.1 The number of fishery talents is relatively small, it is difficult to effectively meet the needs of industry development

In the process of fishery development, as the main implementer of specific work, the professional ability and accomplishment of fishery staff often have an important impact on the development of the industry. At present, fishery talents in China is small, and the professional ability and professional accomplishment of related staff are low. As a result, business work is often vulnerable to factors in the process of development and the related factors are difficult to be solved, which is not conducive to the overall development of fishery in China. The relevant data show that due to the lack of professional knowledge, some staff in their daily work is often difficult to achieve the full play of their own work enthusiasm, and then the overall development of fisheries caused a negative impact and obstacles.

1.2 The comprehensive level of fishery technology is low, which is not conducive to the effective improvement of working efficiency

From the technical point of view, at this stage, the comprehensive level of fishery technology in China is relatively low. Because of the influence of this problem, the efficiency of related work is relatively weak in the process of fishery work. And then is not conducive to the benign development of fisheries in China. Therefore, in order to promote the overall development of China's fishery industry, relevant staff should pay full attention to scientific research. In addition, the relevant information shows that due to the influence of technology, the daily work efficiency of the relevant fishery enterprises is often in a low problem, which limits the overall development of the fishery industry in China.

1.3 The management system is not perfect, which limits the reasonable implementation of daily work

At present, in the process of the development of fishery work, some enterprises have not realized the reasonable establishment and effective perfection of the relevant system in the management work. Because of the influence of this problem, the related work is often hindered in the implementation of the problem, which is not conducive to the overall development of the reservation work. The researchers pointed out that due to the lack of management system, it is often difficult for managers to realize the implementation of specific work, and to reasonably define and evaluation of their own work conditions are not conducive to the reasonable improvement of the management level. For the development of China's fisheries caused a adverse impact.

1.4 Weak supervision of the industry hinders the timely adjustment of the main points of work

At present, in the process of fishery development in China, the establishment and perfection of supervision system has not been effectively realized within the industry. Because of the influence of this problem, it is often difficult to carry out and implement the relevant supervision work in an orderly manner. And then is not conducive to the overall optimization of China's fisheries. In response to related problems, researchers said that due to the lack of regulatory system, industry regulators often find it difficult to fulfill their responsibilities, which is not conducive to the timely adjustment and reasonable reform of the key points of fishery development in China. For the healthy growth of fishery enterprises caused obstacles.

2. Strategies for Optimizing the Development Level of Fisheries in China

2.1 Rational development of fishery talent team to provide strong support for industry development

In the process of fishery work development, in order to promote the rational optimization of fishery cause in China, enterprises should strengthen the reasonable attention to fishery talent team, so as to promote the overall training of fishery talent team. For the development of China's fisheries to lay a solid foundation and protection. The researchers pointed out that through the effective construction of the fishery talent team, in the daily work, the relevant staff can combine the actual needs of fishery development for technical exploration, so as to realize the solution of related problems in the process of fishery development. It has positive value for the development and prosperity of fishery in China. At the same time, through the reasonable training of high-quality entertainment talents, the relevant enterprises can realize the full play of the value of the staff in their daily work, which has a good role in promoting the overall optimization of the fishery industry.

2.2 Actively strengthen the level of investment in scientific research and promote the optimization of fishery work efficiency

In view of the low level of fishery technology in China, in order to promote the overall development of

fishery industry, relevant fishery enterprises should strengthen their reasonable attention to technology research and development in their daily work. In order to realize the research and development of advanced fishery technology and lay a solid foundation, and guarantee for the improvement of fishery work efficiency in China. For example, in the process of ocean-going fishery development, through reasonable exploration of fishing technology, it is helpful to promote the rational development of ocean-going fishery in China, and has good promotion significance for the improvement of the working efficiency of fishing vessels in China. On the other hand, from the point of view of the market, by strengthening the investment in scientific research, it is beneficial to promote the rational development of scientific research work in China, and has a guiding role for the promotion of fishery economic benefits. In general, the reasonable development of this work is conducive to promoting the virtuous circle of fishery cause in China, and has a good guiding role for the overall optimization of fishery cause and the satisfaction of production demand of aquatic products market in China.

2.3 Effectively improve the fishery management system to ensure the orderly conduct of daily work

From the system point of view , in order to promote the rational development of fishery in China, the relevant fishery enterprises should make profound analysis and reflection in their daily work. In order to combine the actual needs of enterprises to establish and perfect the management system, lay a solid foundation and guarantee for the rational development of daily management of fishery enterprises in China. A large number of research data show that by improving the management system, enterprises can ensure the orderly conduct of daily work, and have a good guiding role for the benign development of fishery in China. On the other hand, the researchers point out that through the rational construction of relevant systems, managers can realize the rational practice of their own responsibilities, which has positive guiding significance for the improvement of the efficiency of internal management of fishery enterprises. It is helpful to solve the related problems in fishery work.

2.4 Vigorously promote the construction of industry supervision system and guide the transformation of key points of industry management

The researchers said that in order to promote the rational development of China's fisheries, industry management departments should give full play to their responsibilities, so as to promote the establishment and improvement of the fishery supervision system. In order to achieve reasonable leadership for China's fisheries enterprises, for the overall development of China's fisheries to provide a solid help. In terms of specific practices, relevant enterprises should organize fishery staff with rich experience to establish supervision teams, and at the same time, realize regular inspection of the working conditions of enterprises. In order to provide guidance for the overall development of fisheries in China. Through the analysis of the development of enterprises, the supervisory staff can point out and correct the potential problems in the fishery development work of China in time, and have a positive guiding role for the all-round development of the fishery industry. The practice shows that through the establishment and implementation of the relevant supervision work, it is helpful for the property enterprises to further recognize their development direction in the new period. has a positive role in promoting the benign development of fishery enterprises and the expansion of enterprise scale in China.

Conclusion:

In general, in the new historical period, active fishing has become an important task in the development of China. Based on this, the relevant departments should do a good job in the rational practice of their own responsibilities, in order to guide fishery enterprises to do a good job in the formulation and implementation of optimization strategies combined with their own actual situation, and to provide assistance for the overall development of fishery in China. Enterprises should start with the analysis of talents, technology, system, supervision and so on, so as to cooperate

with the industry management departments to realize the timely adjustment of the internal enterprise work, and lay a solid foundation and guarantee for the overall improvement of the comprehensive level of enterprise development. The researchers point out that through reasonable work, fishery enterprises can realize the reasonable improvement of development strategy, which has positive guiding significance for the all-round development of fishery in China.
